## CCSF 2012 Logic Puzzle

After years of searching for the Shee Ark and Capillata, a small group of Shee has finally succeeded! Their immediate work involved locating and studying the Norns onboard in order to get a better understanding of their behavior. The five Shee decided to make it a race to see who could locate a Norn first. Unfortunately, their reports became jumbled as they sent them back to their home planet. Angry and embarrassed over their inept long-range transmissions, the group of Shee sent back a cryptic list of clues. Can you figure out the Norn breed and terrarium each Shee discovered, and in what order they were found?

- 1. Ofris got hopelessly lost, and was the last to discover a Norn.
- 2. The Zebra Norn (which wasn't discovered by Umbar) was discovered immediately after the Bengal Norn.
- 3. The Shee in the Desert Terrarium reported back immediately after the Shee in the Aquatic Terrarium.
- 4. Of the Zebra Norn and the Norn found by Enras, one was discovered third and the other was found in the Norn Terrarium.
- 5. Ashik found his Norn immediately after the Civet Norn was discovered.
- 6. Of the Norn found in the Meso (which was not the home of the Astro Norn) and the Norn that was discovered second, one was found by Ofris and the other was the Zebra Norn.

				Shee			Terrarium				Breed
